Veritas Information Classifier

Modern Classification Technology and Risk Detection.

Avoid an Information Crisis

Veritas Information Classifier provides an unmatched level of automation and intelligence. The engine delivers consistent data classification and risk detection built to eliminate the dark data challenges standing in the way of successful data security and compliance teams. Veritas designed Information Classifier to simplify data and automate data management across your entire organization by offering scalability and performance for large amounts of data. Information Classifier is the class leader, including hundreds of preconfigured policies and patterns along with the ability to create custom patterns and policies.

Reduce Data Risks and Limit Sensitive Data Exposure

Information Classifier gives you the ability to define patterns and policies using a single console no matter where the data exists within your organization's data landscape. It delivers actionable intelligence about your organization's data, so you can make more informed decisions regarding storage optimization, regulatory compliance and data security.

Information Classifier provides advanced analytics with the following features:

- Over 1,100 patterns to detect sensitive data types and behaviors such as bribery, financial distress, outside business activity, date of birth, social security numbers, credit card numbers and medical records

- Support for language detection featuring 35 primary language detection policies

- More than 250 preconfigured policies for GDPR, CCRA, HIPAA, PCI corporate and public governance initiatives, and other regulations relevant to different countries around the world

- Proprietary confidence scoring to minimize false positives and a built-in test tool to ensure classification accuracy

- Extensibility, so you can configure it to recognize custom data patterns such as leverage keywords, document matching, regular expression, exact data match, sentiment score, and much more

- New patterns and policies released quarterly to help you stay up-to-date with the current regulatory environment

- All patterns and policies are created by subject matter experts in their respective fields

Automate Your Compliance and eDiscovery Needs

Applying an extensive level of automation and intelligence, Information Classifier is built to eliminate the dark data challenges that frequently obstruct data security and compliance teams. Classification enables a better response to data discovery for compliance and legal needs by making it easier to search for relevant data using classification tags. Information Classifier's available policies and patterns make it easy to find sensitive data, and it features additional policies that focus on specific industry and government regulations. Plus, it provides automated classification for effective compliance readiness.

Information Classifier is available in Veritas Data Insight, Veritas Enterprise Vault™, Veritas Enterprise Vault.cloud™ and Veritas eDiscovery Platform.

Data Insight + Information Classifier: Advance Risk Analytics

Data Insight provides improved risk intelligence by triangulating metadata insights, user behavior and content classification to inform proprietary user risk scores and illuminate potential threats. Data Insight includes Information Classifier to provide exceptional analytics and unearth sensitive personally identifiable information (PII) hidden in dark data.

Artificial intelligence (AI) in Data Insight guides the way Information Classifier scans files, optimizing the search for sensitive data in your data landscape by scanning petabytes of data quickly and efficiently. This process leads to better regulatory preparedness and more confidence in making decisions about your data organization's store.

Enterprise Vault and Enterprise Vault.Cloud + Information Classifier: Intelligence for Optimized Retention and Discovery

Enterprise Vault helps organizations store, manage and discover their data more efficiently. Using Information Classifier, administrators can classify new content and re-classify archived content to find where sensitive data is located. It matches classification tags with existing retention policies to ensure consistent management of data that helps free up scarce resources by enforcing the deletion of no- or low-value data.

eDiscovery Platform + Information Classifier: Quick Location and Review of the Data that Matters Most

Using Information Classifier, eDiscovery Platform gives investigators a full arsenal of forensic analytics tools to quickly locate and review the data that is most relevant to litigation.

Classification can also identify sensitive and privileged documents to eliminate the risk of accidentally disclosing information that should remain private.

Information Classifier helps organizations around the globe ensure better risk management and governance.

About Veritas

Veritas Technologies is a leader in multi-cloud data management. Over 80,000 customers—including 95 percent of the Fortune 100—rely on Veritas to help ensure the protection, recoverability, and compliance of their data. Veritas has a reputation for reliability at scale, which delivers the resilience its customers need against the disruptions threatened by cyberattacks, like ransomware. No other vendor is able to match the ability of Veritas to execute, with support for 800+ data sources, 100+ operating systems, 1,400+ storage targets, and 60+ clouds through a single, unified approach. Powered by Cloud Scale Technology, Veritas is delivering today on its strategy for Autonomous Data Management that reduces operational overhead while delivering greater value.
