Veritas Alta™ View

Manage and secure your entire data estate
from one AI-powered unified management interface.

Overview

The growth of applications and data has increased the management overhead for backup admins and cloud personnel, who now must manage multiple cloud and on-premises environments. This can be costly and complex, as incompatible tools must be cobbled together to view and manage the environment. Moreover, you're wasting management time that could be better spent focusing on proactively protecting your organization against cyber threats.

It's time to simplify administration and regain control with Veritas Alta View — a single management console to efficiently manage data protection across any environment at any scale.

89%
said that unifying cloud data protection and backup strategy into a single vendor is an organizational priority

Veritas Alta View

Veritas Alta View is a centralized cloud-based management console that provides a unified view and control of the entire data estate—across the edge, data center, and cloud — from a single pane of glass. It allows administrators to easily monitor and manage all your data protection, application resiliency, and compliance activities from one location.

Feature	Benefit
Single pane of glass for data protection	View and manage multiple NetBackup and Veritas Alta™ Data Protection domains, backup jobs, policies, and critical events simplifying enterprise data protection
Alta™ Copilot, AI-powered operational assistant	Simply and speed up enterprise data protection with Automated Protection Policy Creation, Audit and Protection of Unprotected Assets and Intelligent Backup Job Failure Analysis. Enables self-serve product support and dynamic data visualization.
Alta™ Recovery Vault	Manage your storage consumed and potential overages
Cyber Resiliency Dashboard	Enhanced security with a singular view of your entire data estate cyber security posture
Orchestrated Recovery Blueprints	Automates customer-defined workflows to meet recovery goals and compliance needs
Accelerated Threat Hunting and Blast Radius	Speeds up threat detection and minimizes damage with hash-based malware detection and efficient file indexing
Intelligent Recovery Point Recommendations	Suggests optimal recovery points, balancing speed and data integrity using advanced analytics
Role-based access controls, SSO, multi-factor authentication, and auditing	Enables enhanced security, ensure compliance and monitoring and provides a streamlined user experience
Unified backup, storage and alert reports	Enables centralized insights, improved decision-making and enhances operational efficiency
In-application audit logging	Streamlines support case resolution of failed jobs
Monitoring and alerting for storage life cycle policy backlog	Enables proactive issue resolution and enhances operational efficiency

A Single Portal to Access and Manage All Your Veritas Data Protection and Resiliency Services

Nearly 60 percent of Veritas customers manage at least 10 domains on-premises and countless cloud-based applications, leading to siloed management, inconsistent protection and cyber resiliency, and increased total cost of ownership (TCO). Veritas Alta View aggregates data from across your data management estate into a single management console, allowing you to access other data services while extending visibility, delivering consistent protecton and enhanced cyber resiliency.

- Unify all NetBackup and Veritas Alta Data Protection domains, whether deployed on-premises or in the cloud

- Elevate your administrators by simplifying complex tasks and automatically identifying cyber vulnerabilities

- Collaborate across the entire organization by allowing users to access and edit specific resources based on their role

- Enhance operational efficiency through dynamic data visualization

- Access and manage other Veritas Alta services for complete data management in the cloud

Unlock the power of centralized data protection with Veritas Alta View:

- Centralized data protection and management across all environments from a single interface, eliminating the need for multiple tools

- Simplified yet flexible policy management and workflows that support consistency across multiple protection tools by helping to eliminate configuration drifts

- Unified visibility with actionable insights for greater control over protection strategies and outcomes

- Quickly identify applications and services at risk with comprehenisive reports and alerts

- Delivered as a service that quickly increases performance and reliability while reducing IT overhead (TCO, skill sets, and more) and provides access to the latest technology

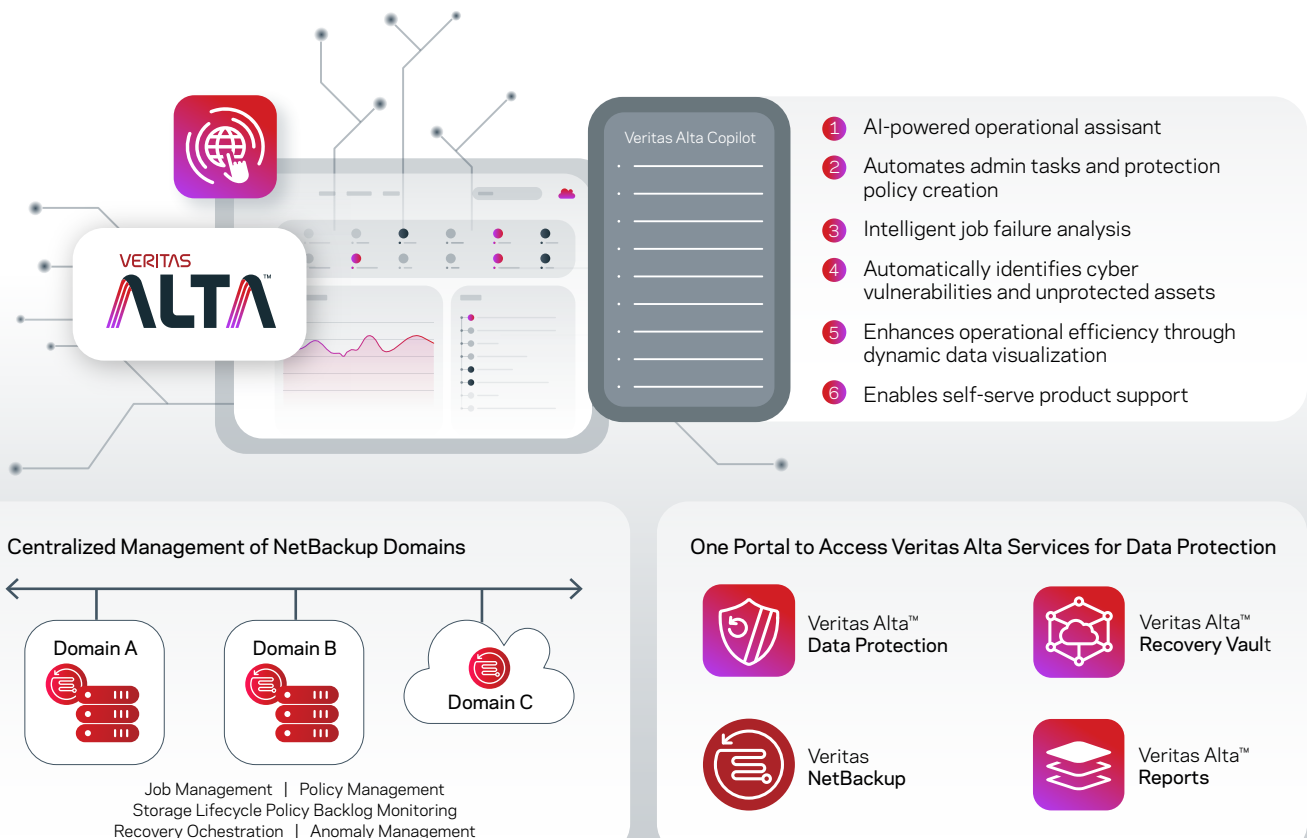

Veritas Alta Copilot

1. AI-powered operational assisant
2. Automates admin tasks and protection policy creation
3. Intelligent job failure analysis
4. Automatically identifies cyber vulnerabilities and unprotected assets
5. Enhances operational efficiency through dynamic data visualization
6. Enables self-serve product support

Veritas Alta™ Reports

Figure 1. A unified management console, secured by default, to manage all your data protection services

Streamline and Automate for Greater Operational Efficiency

Many organizations struggle to understand their data footprint due to having an average of 3 data protection tools deployed, *(Source: Vanson Borne)*. Moreover, data breaches are often caused by human error, so it's important to streamline and automate the process of maintaining data resiliency and have an AI-powered conversational assistant that enables administrators to gain immediate help and insights.

Veritas Alta View simplifies hybrid and multi-cloud data management by quickly monitoring and deploying jobs, policies, reports and alerts from a unified experience.

Figure 2. Veritas Alta View Dashboard

- View and manage policies with single-click deployment

- Monitor SLPs with the ability to set image-age threshold alerts

- View critical events in one view

- Identify and view all clients and hosts, versions, applications, and the data centers with which they are associated

- Collect audit logs of failed jobs for faster case resolution

- Gain insights, monitor and optimized data protection with detail reports.
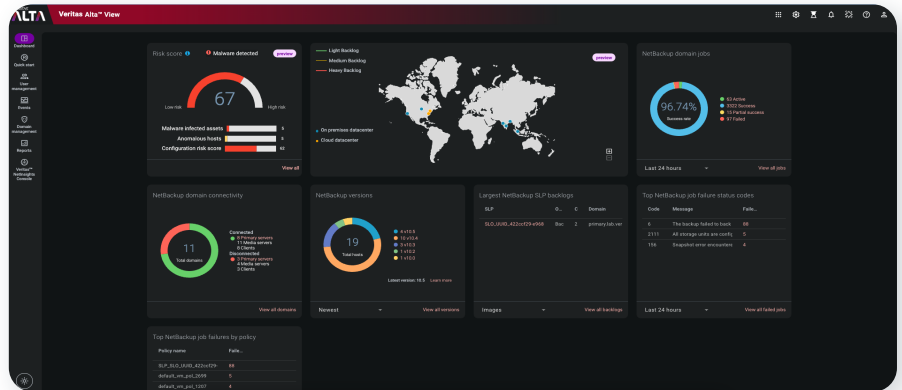

Hybrid and Multi-Cloud Protection that is Secure, Always On, and Always Up to Date

When data was stored and protected locally within your data center the control was in your hands. But with the cloud, you must remember that security is a shared responsibility between you and your cloud service providers (CSP)/application vendors. Therefore, you need to understand the limitations of your CSP data protection tools, be aware that you are ultimately responsible for protecting the data, and consider the multiple types of resources and applications across clouds.

Veritas Alta View closes the responsibility gap by providing an enterprise-hardened and secure application for managing hybrid and multi-cloud environments. It meets high security requirements and verification levels with user authentication, device identification, and data encryption.

Veritas Alta View delivers:

- **Integrated best practices and expertise**—assure and improve security posture while reducing the likelihood of attacks by adopting best practices from an experienced provider

- **Alta reports**—comprehensive reporting and analytics to identify, monitor, and improve operational performance

- **Network isolation**—neutralize the impact of attacks with a physically separate and clean set of files on demand, using air gap solutions and control/data plane separation

- **AI-powered Operational Assisant**—streamline enterprise data management, boost cyber resilience, and empower IT teams

- **Zero trust security**—secure application access with unified RBAC, MFA, and SSO

Veritas Alta Cloud Data Management Platform

Veritas Alta View is a cloud-native unified, data management console that is part of the Veritas Alta cloud data management platform, a comprehensive, powerful platform that provides essential cloud data services engineered to ensure optimal performance and security across any environment. It allows organizations to take complete control of their data and applications in the cloud.

Take advantage of these other data protection services today:

- **Veritas Alta™ Data Protection**—offers a self-managed, cloud protection option for 60+ different cloud environments, providing flexible disaster recovery options, elastic infrastructure, native container protection and recovery, advanced storage technologies, and AI-powered automated ransomware defense.

- **Veritas Alta™ Recovery Vault**—provides secure-by-default, cloud-based data vaulting, enabling quick and confident data recovery for Veritas Alta™ Data Protection, Veritas NetBackup, and NetBackup-powered appliances.
