

Veritas Usage Insights

A free SaaS offering empowering you with data trends and proactive visibility via an easy-to-use interface.

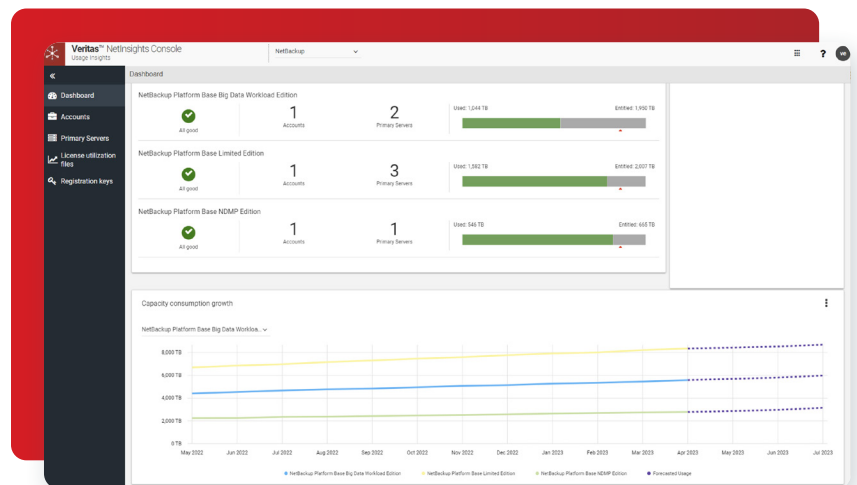

Top Three Customer Needs

Today's organizations require modern, multi-cloud data protection and management solutions, allowing them to maintain constant visibility and alignment of data usage and costs across their entire estate. Because every second is incredibly important to ensure all the data across the organization is safe, appropriate protection policies are set up, and RTO/RPOs are met, customers are left with extremely limited bandwidth to focus on other important tasks. Thus, the following have become table stakes to understand the cost control and remediation aspects of your data protection estate:

- **Visibility and Transparency:** I want complete visibility into my entire estate to easily understand the total amount of data I am backing up using Veritas products.
- **Historical, Current, and Future Budgetary Insights:** I want to understand how the data is growing, so that I can use those insights to appropriately expand my infrastructure and plan my future budget needs.
- **Ease of Use:** I want to spend minimal effort in collecting and combining information from multiple sources, and get valuable insights from my data.

Veritas Usage Insights Can Address Customer Needs

Veritas Usage Insights is a unified, free SaaS offering for all NetBackup™ and Veritas Alta™ Data Protection customers. With an intuitive UI, it provides instant insights across your entire NetBackup and Veritas Alta Data Protection infrastructure and empowers you to share information effortlessly with your management and compliance teams, while maintaining constant observability of data usage across your infrastructure. The following highlights how Usage Insights can meet and exceed your needs and simplify data management so that you can focus on other essential tasks:

Visibility and Transparency

- Usage Insights empowers you with an automated, real-time visualization of data protected across your entire estate, so that you can effectively and easily understand license consumption and all associated costs.
- It provides actionable, self-service insights by giving you visibility into the total number and version of servers you are protecting, data you are backing up on each, and the different policy types running in your environment; all of which can be leveraged to make optimization decisions.

Historical, Current, and Future Budgetary Insights

- Usage Insights uses your historical data to create trend graphs that will help you understand your data growth—not only over the past year, but also in the future. This makes operational budgeting easier as you can leverage the insights to determine whether the existing infrastructure can support your needs, or plan for expansion.
- You get the flexibility to view the trend graphs by product versions, policy types, and more filters.
- It will enable you to identify your license requirements quickly and easily.

Ease of Use:

- Usage Insights is a unified single pane of glass built to address your needs. With near real-time reporting, you get visibility into all the data, eliminating the need to pull information from different tools or run manual reports on multiple servers to get visibility into protected data, saving you time and effort.
- It allows you to set thresholds so that you are alerted within the product when nearing your entitlement limits.
- You will have visibility into any unusual spikes in protected data, enabling you to take proactive remediation action.

With Usage Insights, you can ensure greater alignment with your future IT plans and get more agility, control, and value from your investment. In summary, here's how Usage Insights adds value:

	With Usage Insights	Without Usage Insights
Protected Primary Servers and Versions	✓	✓
Protected Policies	✓	✓
Data Protected/Server	✓	✓
Policies Protected/Server	✓	✓
Automated Reporting	✓	✗
Trend Graphs	✓	✗
Single Pane of Glass	✓	✗
Proactive Visibility	✓	✗
No Complex, Manual Reports	✓	✗
Consolidated Entitlements	✓	✗
Role-Based Access Control (RBAC)	✓	✗
In-Product Alerts	✓	✗

While you can perform some tasks without leveraging Usage Insights, many can be manually intensive and time-consuming. Veritas values your time, and Usage Insights addresses that gap by automatically performing these tasks for you so that you can invest your effort in more crucial activities.

About Veritas

Veritas Technologies is a leader in multi-cloud data management. Over 80,000 customers—including 95 percent of the Fortune 100—rely on Veritas to help ensure the protection, recoverability, and compliance of their data. Veritas has a reputation for reliability at scale, which delivers the resilience its customers need against the disruptions threatened by cyberattacks, like ransomware. No other vendor is able to match the ability of Veritas to execute, with support for 800+ data sources, 100+ operating systems, 1,400+ storage targets, and 60+ clouds through a single, unified approach. Powered by Cloud Scale Technology, Veritas is delivering today on its strategy for Autonomous Data Management that reduces operational overhead while delivering greater value.
