

SOLUTION BROCHURE

Gain Control of Your Data

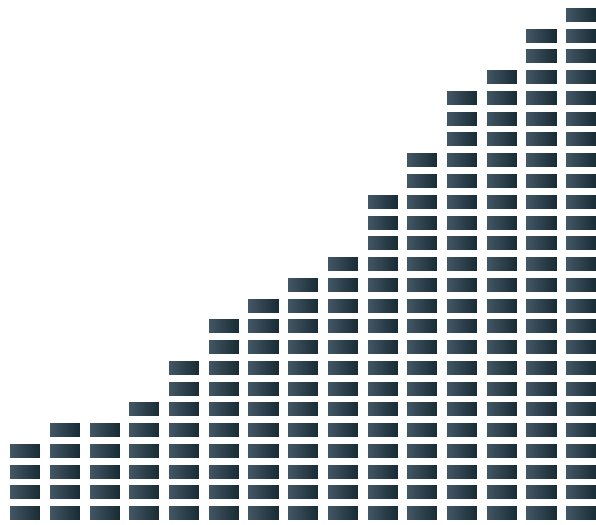

True genius resides in the capacity for evaluation of uncertain, hazardous, and conflicting information."

- WINSTON CHURCHILL

Information Can Be Your Greatest Ally

163 ZB

The total amount of data worldwide by 2025.¹

But unknowingly, for most organizations it has become public enemy #1.

Exponential information growth comes with a significant price tag and tremendous risk.

Digital compliance is the strategy organizations are deploying to proactively manage information risk. This strategy requires organizations to effectively identify and catalog the organization's most critical information, eliminate information that contains no value and ensure compliance with all local regulations.

Organizations can achieve this strategy through a multi-faceted approach of gaining visibility, providing context and taking action over information. Successful execution of these steps will remove organizational barriers to information decision-making.

Veritas simplifies this process by illuminating information hazards and providing tools for automated remediation. By delivering a detailed blueprint of your information ecosystem, Veritas arms your organization to fight back against the exponential data curve and reign over risk.

Benefits of the Veritas Solution

33%

of all data stored is classified as redundant, obsolete or trivial (ROT).

52%

is dark data whose value is unknown.²

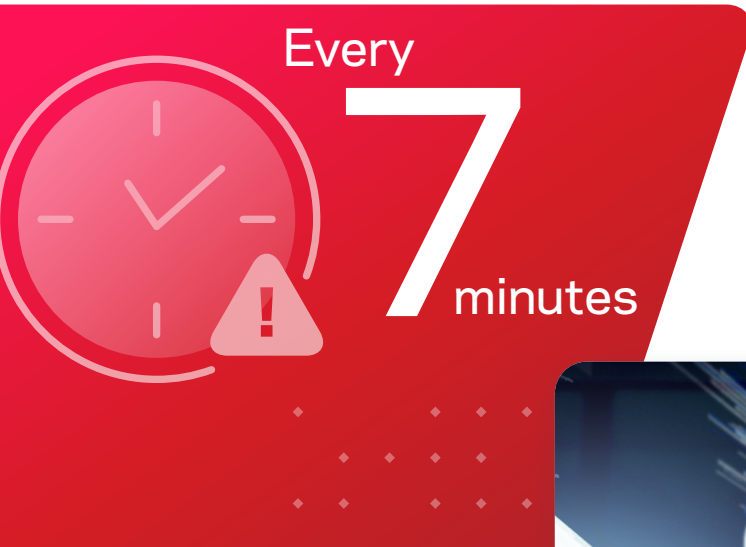

Gain Visibility, Expose Risk

The first stage of a digital compliance strategy requires gaining insight into your organization's information ecosystem.

Critical intelligence regarding your information's age, location and ownership provides the roadmap for effective information decision-making.

Understanding the risk profile of your information allows your organization to shift from the "store-everything" mentality to a value-focused perspective.

Benefits of the Veritas Solution

The frequency new regulatory alerts are issued, increasing compliance risk from evolving privacy regulations worldwide.³

Provide Context, Ensure Compliance

Achieving full digital compliance doesn't occur overnight. Rather, it evolves from a systematic approach that brings together the right technology. By using this technology, organizations will ensure successful governance initiatives outlast individual projects.

Additionally, technologies that integrate and automate will drastically reduce the manual effort required to manage workflows, comply with regulations and mitigate risk.

Benefits of the Veritas Solution

58%

of IT decision-makers say the complexity of their data footprint limits their ability to realize the value of their data.⁴

Take Action, Execute Decisions

Once organizations have visibility into their information footprint and context from that information, they must take action. Ultimately, the choice is between retention, protection and deletion. By leveraging critical insights into the value of their information, organizations can assign classifications, deploy policies, retrieve what's relevant and initiate cleanup.

Poor data quality is costing organizations an average of \$11.8 million per year. As a result, it's imperative that organizations start cleaning up their information footprint immediately.⁵

BLUESOURCE

Veritas Digital Compliance Solutions

Veritas offers an integrated portfolio of solutions that provide real-time insight into an organization's information footprint and empower information leaders to make decisions about what to protect, what to retrieve and what to delete.⁴

Veritas Data Insight

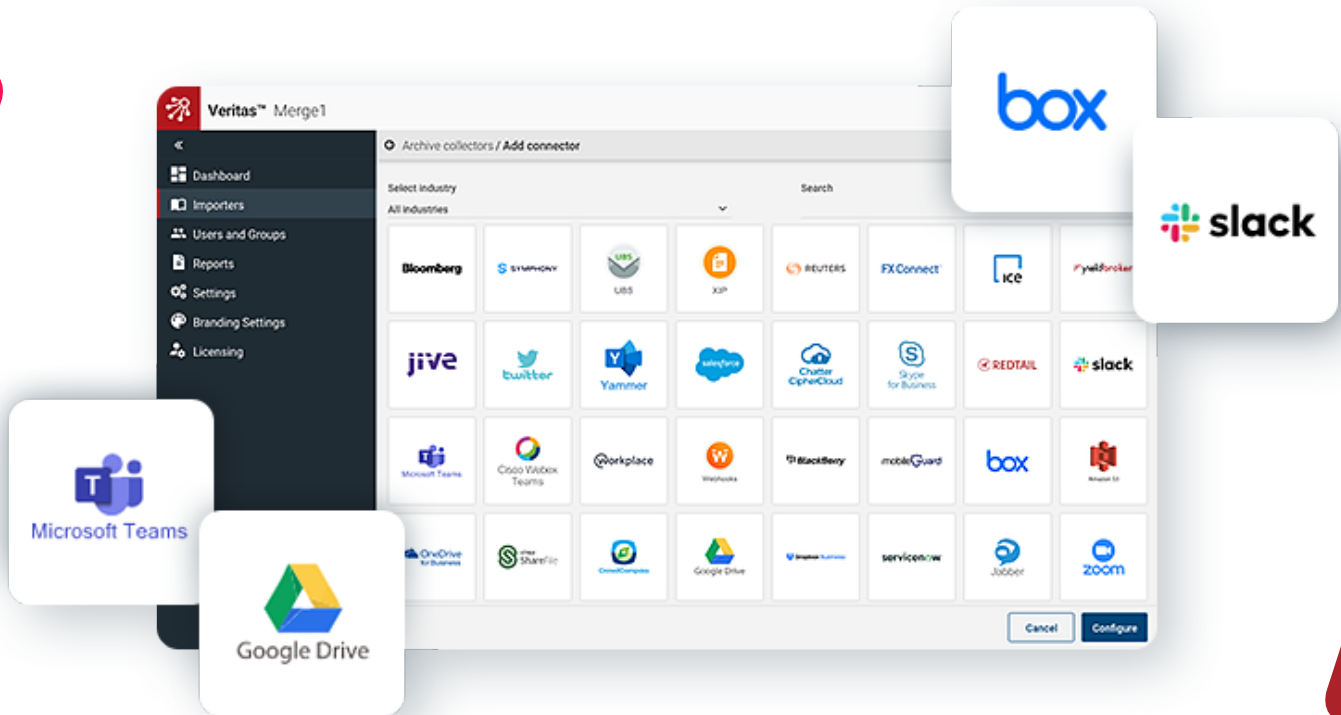

Visualize Data, Prevent Theft

Data Insight is a file classification and analysis tool that identifies information risk hazards and delivers remediation capabilities to ensure successful execution of an organization's compliance strategy.

Using Data Insight's reporting and visualization features, users can classify at-risk data, rescind access to sensitive data and engage data owners to improve decision-making.

Analytics provide critical intelligence for all data migration, data deletion and access control initiatives.

Broad Coverage, Comprehensive Capture

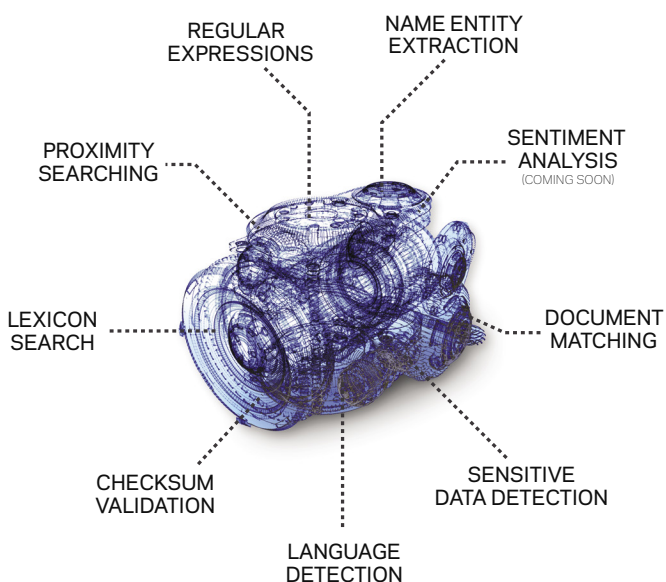

With our Merge1 integration, Veritas provides coverage for all the data sources that are relevant to your regulatory compliance, internal policies and eDiscovery initiatives.

Today, business communications increasingly occur on a wide variety of new digital media.

Merge1 complements Veritas solutions—Enterprise Vault, Enterprise Vault.cloud and eDiscovery Platform—to capture more than 80 popular message types, including social media, instant messaging, mobile communications, financial platforms and cloud-based content.

Veritas Information Classifier

Veritas Information Classifier is a powerful engine that is embedded in several Veritas products, each of which is targeted for various use cases.

Visibility Through Classification

Enterprise Vault and Enterprise Vault.cloud—Index and classify archived data to allow for faster search, retrieval or disposal of information.

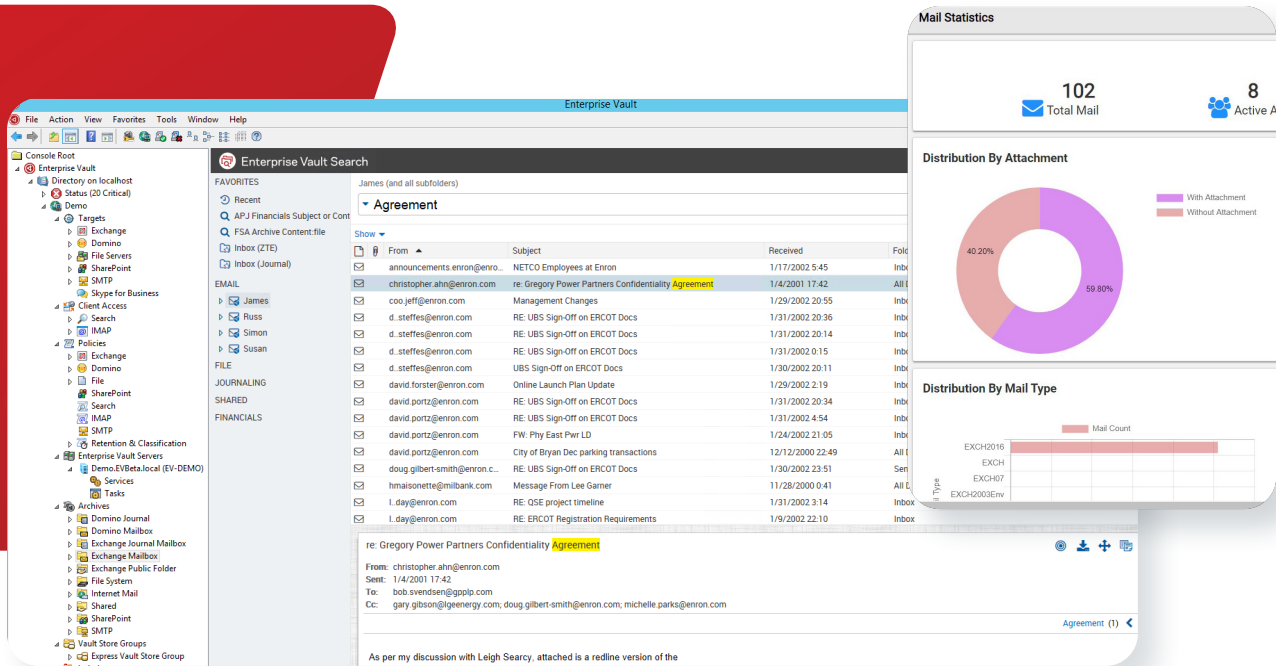

eDiscovery Platform—Uses analytics and deep search of metadata and content in addition to classification to enable enterprises, governments and law firms to manage legal matters more quickly and effectively.

Data Insight—Classifies files and gathers metadata attributes and user behavior forensics, giving users actionable intelligence into data ownership, usage and access controls.

Veritas Enterprise Vault & Enterprise Vault.cloud

Optimize Storage, Automate Retention

Enterprise Vault, available on-premises and in the cloud, provides information archiving capabilities for organizations to efficiently store and retrieve unstructured information.

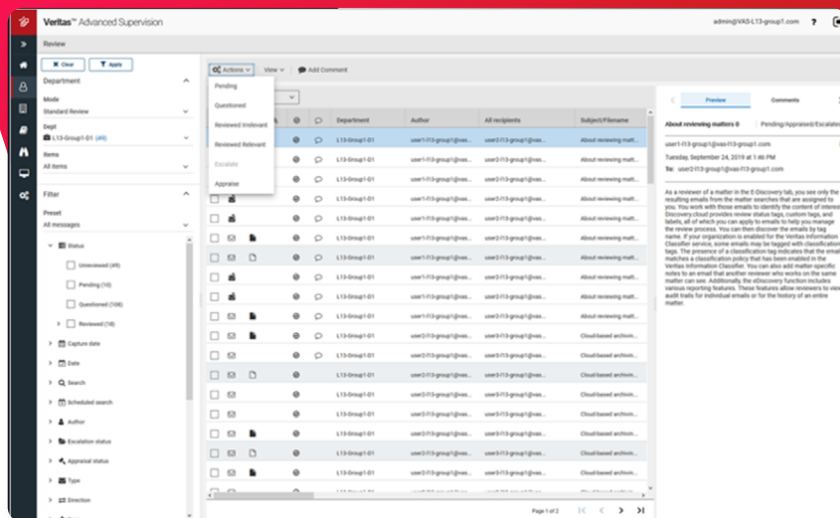

Through its integration with Information Classifier, Enterprise Vault helps organizations improve compliance and automate the process of eliminating no-value data.

Archiving reduces an overall information footprint, ensures regulatory compliance and improves the efficiency of identifying critical pieces of information.

Veritas Advanced Supervision

Veritas Advanced Supervision is a powerful compliance solution that lets organizations perform cost-effective supervisory review of regulated communications.

Ensure Compliance, Monitor Effectively

By providing the framework to intelligently sample electronic communications, it enables you to manage review by appropriate supervisors and record the process for audit purposes.

Advanced Supervision helps decrease the cost and effort of ensuring compliance review through targeted sampling and the optional addition of classification while also providing proof of compliance.

Veritas eDiscovery Platform

The screenshot displays the Veritas eDiscovery Platform interface. At the top, there's a navigation bar with tabs: Case Home, Legal Holds, Collections, Processing, and Analysis & Review. The 'Legal Holds' tab is active. Below the navigation bar, there's a section for 'All Hold Notices (refresh)' with a table showing notices and their status. A dropdown menu is open, showing various filters for the notices, such as 'By Folder any', 'By Tag any', 'By Prediction Rank any', 'By Sender Domain any', 'By Sender Group any', 'By Sender Name any', 'By Recipient Domain any', 'By Recipient Name any', 'By Custodian any', 'By Document Type any', 'By File Type any', 'By Document Size any', and 'By Language any'.

Intuitive Analysis, Targeted Review

The eDiscovery Platform is an end-to-end investigation tool that quickly collects, processes and organizes information for review.

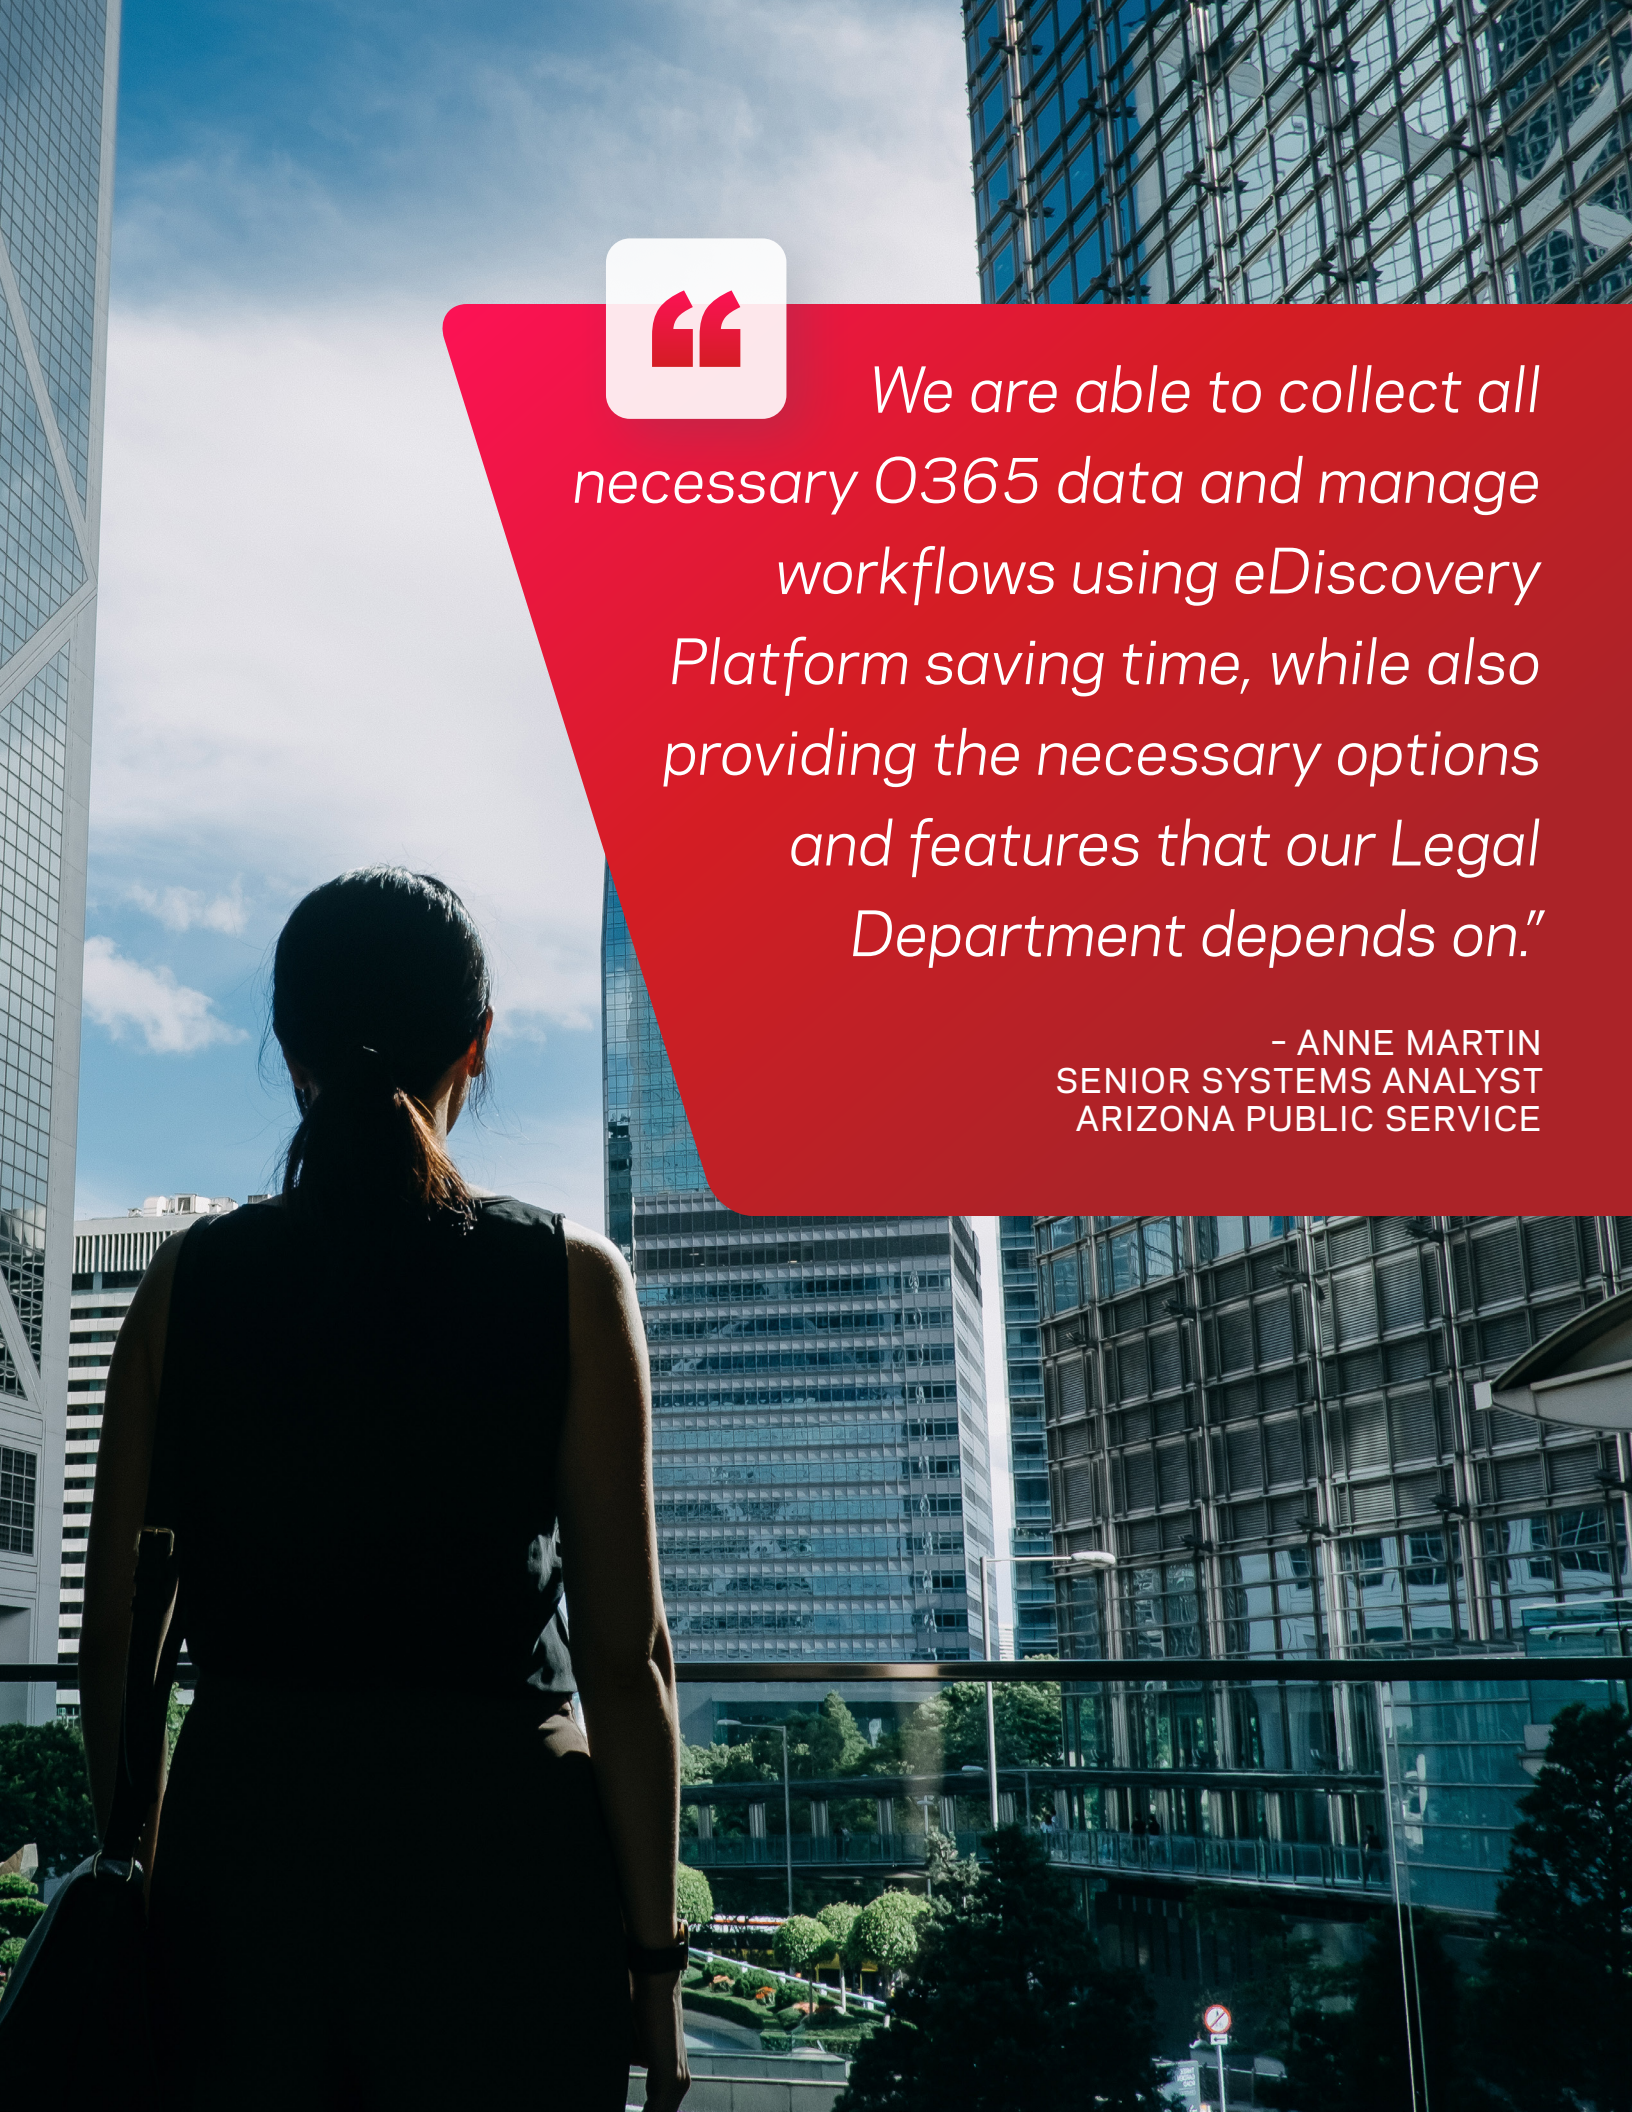

Using the eDiscovery Platform's consumer-grade features, legal and compliance teams can manage the tool themselves and experience accelerated time to resolution.

With better insight and less complexity, the eDiscovery Platform enables investigators to focus on solving the case instead of navigating through IT.

We are able to collect all necessary O365 data and manage workflows using eDiscovery Platform saving time, while also providing the necessary options and features that our Legal Department depends on."
